HTML5, BEM, CSS3, SASS, JavaScript, TypeScript, React, Redux Toolkit, NextJS, Bootstrap5, MaterialUI

NPM, Webpack, Prettier, Git, Figma

Projects

[CRUD Job Posts App \(Auth & Database\)](#) | [LIVE](#) | [Github](#)

React, Express, MongoDB, Typescript, Material UI Redux Toolkit,

CRUD Job Posts App that allows you to create an account and perform CRUD operations on job posts that belong to the user.

Features

- Login, Register and Logout functionality with JWT (jsonwebtoken).
- REST Jobs API created with Express & MongoDB.
- Global Redux State to manage authenticated user functionality, job posts CRUD functionality and displaying feedback messages to client.
- Protected private routes (create job, edit job, my ads and delete job) where only users that created the ad can only edit, update and delete that certain job.
- Global routes such as viewing all ads and all the ads a certain user has.
- Reusable job display component that renders dynamic UI (all jobs, my jobs or user jobs) based on options prop.
- Reusable create job component that allows to either create a job or edit a job based on options prop.
- Front-end sort, pagination and search functionality.
- Options to edit, mark and delete are only available to users that the job belongs to.
- Material UI for building UI and usage of TypeScript.
- Fully responsive across devices.

[REACT MOVIE APP](#) | [LIVE](#) | [Github](#)

React, Typescript, Material UI, SASS, Axios

Movie App that fetches API from theMovieDB and dynamically displays into UI

Features

- Custom Axios Config with relevant API query to fetch data from TMDB API.
- Object of methods that generate dynamic API endpoints and returns the fetched data through Axios GET request.

- Dynamic Genre component that generates genres based on an array of numbers.
- Carousels with SwiperJS.
- Dynamic Carousel row component that generates title and relevant cards with given props.
- Search functionality from API.
- A load more button that generates a new page from API and adds onto the previous page.
- Page to see movies in detail by fetching provided ID and category from router props and fetching to API,
- Custom Material UI theme for typography.
- Coded in TypeScript.
- Responsive Across All Devices.

[REACT POKEMON APP](#) | [LIVE](#) | [Github](#)

React, Typescript, Material UI, Redux Toolkit, Axios

A Pokemon App that allows you to pick a pokemon from a list and see it displayed on a PokeDex.

Features

- Fetched pokemon api with axios and destructured the necessary data to integrate with UI.
- CreateAsyncThunk and extraReducers to do async actions on redux toolkit.
- Global state of pokemon list through redux toolkit and reducer to be able to set single pokemon upon clicking a pokemon from that list which will then get displayed on the pokedex.
- Conditional rendering of pokemon list upon clicking a button and dynamic styles based on pokemon type.
- Local state for filtering state with search bar.
- Dynamic options based on unique pokemon types and filters based on select options.
- Material UI Components.
- Typescript.
- Fully responsive across devices.

Education

NAIT - DIGITAL MEDIA AND IT, WEB DESIGN AND DEVELOPMENT CONCENTRATION

Graduated: 2022

Relevant Coursework

- Semantic HTML markup and CSS to optimize and deploy websites that match the client's needs.
- Implementation of JavaScript to create interactive user experience.
- Effective communication strategies for working in a team.
- Responsiveness for all devices
- React
- SASS, Bootstrap, Tailwind CSS
- CMS (Wordpress)
- UX Design on client examples
